Problem quickname: 2201

1)

Quick:
2201

In the coordinate system, a straight line is shown with a slope triangle. Derive the slope by reading "run"= dx and "rise"= dy . Then, reduce the fraction to lowest terms.

$$\text{Slope: } m = \frac{dy}{dx} = \frac{2}{2} = 1$$

$$\text{Slope: } m = \frac{dy}{dx} = \frac{-2}{2} = -1$$

2)

Quick:
2201

In the coordinate system, a straight line is shown with a slope triangle. Derive the slope by reading "run"= dx and "rise"= dy . Then, reduce the fraction to lowest terms.

$$\text{Slope: } m = \frac{dy}{dx} = \frac{2}{2} = 1$$

$$\text{Slope: } m = \frac{dy}{dx} = \frac{-2}{2} = -1$$

3)

Quick:
2201

In the coordinate system, a straight line is shown with a slope triangle. Derive the slope by reading "run"= dx and "rise"= dy . Then, reduce the fraction to lowest terms.

$$\text{Slope: } m = \frac{dy}{dx} = \frac{4}{4} = 1$$

4)

Quick:
2201

In the coordinate system, a straight line is shown with a slope triangle. Derive the

slope by reading "run"= dx and "rise"= dy . Then, reduce the fraction to lowest terms.

$$\text{Slope: } m = \frac{dy}{dx} = \frac{2}{2} = 1$$

$$\text{Slope: } m = \frac{dy}{dx} = \frac{1}{2} = \frac{1}{2}$$

Good Luck!
